

HOW TO FIT AN ENTRANCE CLOSER

1. Place entrance closer on front of the bee box as in picture 1. Make sure the entrance closer is sitting on the bottom board.

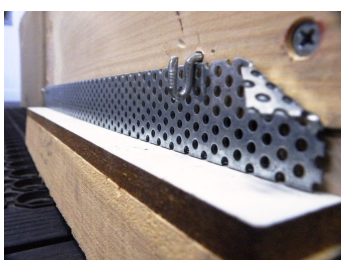

< Picture 1

2. Place a screw in the top left hand corner of the entrance closer as in picture 2.

< Picture 2

3. Then place a nail in the bee box just above the entrance closer on the right hand side and bend to a "U" shape See picture 3.

<Picture 3

4. To operate, in the closed position the nail is bent downwards over the entrance closer to keep it locked in position. See picture 3 in the closed position.

5. To open the entrance closer, twist the nail upwards and slightly pull the closer outwards and rest it on top of the nail. See picture 5 in the open position.

<Picture 5

Alternatively you can place a screw in each end to keep it closed for transporting and remove once the bee hive is placed in its permanent position.
