WAX MELTER – PROCEDURE

Do not run on an extension lead.

1. Add cold water to level above electric element cover ó say 2ö (50 mm) above.
2. Add Wax ó can fill tank to almost top.
3. Set simmerstat to HIGH. (Optional)
4. Turn on electricity
5. Heat wax & water until wax melted.
6. Turn simmerstat back so wax does **not** boil. (Optional)
7. Leave stand for 4 hours or longer (impurities drop out of wax, into water).
8. Turn simmerstat OFF. (Optional) Or unplug electric cord
9. Place Wax Mould under spout.
10. Add COLD WATER by trickle into bottom, until wax mould full.
(do not add water to fast or it will stir up the dirt that has settled in the bottom)
11. Turn off water. Place new wax mould. Turn on trickle.
12. Repeat until all wax emptied.
13. Empty tank. Clean Tank
